It currently consists of 16 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Center: Washington University Genome Sequencing Center

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   * NOTE: This is a 'working draft' sequence. It currently consists of 18 contiss. The true order of the pieces * is not known and their order in this sequence record is * arbitrary. Gaps between the contigs are represented as * runs of N, but the exact sizes of the gaps are unknown. * This record will be updated with the finished sequence * as soon as it is available and the accession number will * be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Center project Information Center project name: H_NH0732A19

XX XX XX XX XX XX XX XX XX XX XX XX XX		-FEB-2001; HOB-) RHOBI	WPI; 2002-707007/76.  XX  XX  New isolated ENDO promoter from the gene of Arabidopsis thaliana, useful PT for directing expression of genes in plants.  XX  XX  XX  XX  XX  Claim 1; Page 17; 18pp; English.  XX  CC The invention relates to the novel isolated Arabidopsis thaliana  CC endomembrane associated (ENDO) gene promoter sequence. The nucleic acid  CC is useful for directing expression of genes in plants. The present  CC sequence represents the A. thaliana ENDO promoter of the invention

representative of expressed polynucleotides in the plant cell with an array or probes representative of the plant cell genome, and (b) detecting a profile of expressed polynucleotides in the plant cell characteristic of a stress response. The method is useful in the production of transgenic plants, cells and seeds and in producing plants with increased tolerance to abiotic stress. The present sequence is that of an Arabidopsis thalians atress regulated gene (ARZ12196-ARZ17574) used in methods of the invention. Note: The sequence data for this patent is not represented in the printed specification but is based on sequence information supplied to Derwent by the European Patent Office
                                                                                                                                                                                                                                                                                                      180
                                                                                                                                                                                                                                                                                                                                                                                           300

The invention relates to an Arabidopsis thaliana nucleic acid (I) comprising a sequence capable of hybridising under stringent conditions to a sequence selected from any one of 999 sequences (ABN98233-ABN99231), given in the specification or its fragment. A polypeptide (II) encoded by (I), a transgenic plant (III) comprising an exogenous nucleic acid or a genetically modified cell (IV) comprising an exogenous nucleic acid, is useful for screening a candidate agent for its biological effect. (I) is useful in identifying homologous or related genes, in producing compositions that modulate the expression or function of its encoded protein, mapping functional regions of the protein and in studying associated physiological pathways. (I) is also useful for the genetic
                                                                                                                                                                                                                                                                                                                                                                                 New Arabidopsis thaliana nucleic acid for identifying homologous genes, producing compositions that modulate the expression or function of its encoded protein, and mapping functional regions of protein.

The invention relates to a novel human polynucleotide and the encoded polypeptide. A polynucleotide of the invention may have a use in gene therapy. An oligonucleotide of the invention ADM06202-ADM06773 is useful as a primer for synthesizing the polynucleotide or as a probe for detecting the polynucleotide. The polynucleotides ADM01316-ADM03758 are useful in gene therapy, for developing a diagnostic marker or medicines for regulating their expression and activity, or as a target of gene therapy. The proteins ADM03759-ADM06201 encoded by the polynucleotides are useful as pharmaceutical agents. The present sequence represents a cDNA sequence of the invention.

acreening assays of various plants trains to determine the strains that are best capable of withstanding a particular disease or environmental stress. (II) and (III) are useful for screening of biologically active agents, e.g. fungicides, insecticides, etc., for elucidating biochemical pathways. The screened agents are useful in improved methods of treating crops to properms to identify agents that mimic or enhance the action of tolerance factors. Such agents are useful in improved methods of treating crops to programs to identify agents that mimic or enhance their tolerance to environmental stress. (I) is also useful for enhancing or inhibiting production of a biosynthetic product in a plant. (III) is useful for identifying other mediators that may induce expression of proteins of interest, for establishing the extent to which any specific insect and/or pathogen is responsible for damage to a particular plant, for identifying other mediators that enhance or induce to environmental stress, for identifying factors involved in for identifying productions of nutritional, commercial, or medicinal value and for identifying productions of nutritional, commercial or medicinal value and construction of the callular metabolism and for screening compounds that may affect the biological function of the gene or gene products. The specification, but was obtained in electronic format directly from USPTO or expression of the printed in electronic format directly from USPTO
manipulation of cells, particularly plant cells. (I) is also useful in

                                                                                                                                                                                                                                                                                                                 New nucleic acids involved in neuronal regeneration, useful in screening for modulators of regeneration or synaptic efficiency, and potential
                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to nucleic acids (ABL98957-ABL99004) involved in regenerative neuronal processes and encoded proteins (ABB79405-ABB79409) used to screen for compounds and potential therapeutic agents that modulate nerve cell regeneration and/or synaptic efficiency. They may also be used for treatment or diagnosis of defective or pathological
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              .

Claim 1; SEQ ID NO 2360; 305pp; English

```
The invention relates to human polynucleotides (AAI79941-AAI93841) and the encoded proteins (AAO00010-AAO13910) that exhibit activity elating to cytokine, cell proliferation or cell differentiation or which may induce production of other cytokines in other cell populations. The production of other cytokines in other cell populations. The polynucleotides and polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various cytokine-like activities, e.g. stem call growth factor activity, immunoomodulatory activity and activity, tissue growth factor activity, immunoomodulatory activity and activin/inhibin activity and may be useful in the diagnosis and/or treatment of cancer, leukseamia, nervous system diagnosis and/or treatment of cancer, leukseamia, nervous system diagnosis architis and inflammation. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                 Isolated nucleic acids and polypeptides, useful for preventing diagnosing and treating e.g. leukemia, inflammation and immune disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Human; prostate cancer; cytostatic; carcinogen; pharmacodyanamic marker; pharmacogenomic marker; gene; 88.

The invention relates to an isolated nucleic acid molecule (I) comprising a nucleotide sequence given in Tables 1-9 (ABV0010-ABV62213) of the specification or its complement. (I) is useful for: (a) assessing whether a patient is afflicted with prostate cancer; (b) monitoring the progression of prostate cancer in a patient; (c) assessing the efficacy of a therapy for inhibit prostate cancer in a patient; (d) assessing the efficacy of a therapy for inhibiting prostate cancer in a patient; (e) selecting a composition for inhibiting prostate cancer in a patient; (f) assessing the prostate cell carcinogenic potential of a compound; (g) determining whether prostate cancer has metastasized in a patient; (d) assessing the aggressiveness or indolence of prostate cancer in a patient; (i) is also useful as a pharmacodyanamic or pharmacogenomic marker
                                                             state cells and correlating with presence of prostate cancer, useful detecting presence of prostate cancer, useful
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Recombinant DNA construct; transformed plant; improved plant property; cold tolerance; heat tolerance; drought tolerance; herbicide; osmosis; pathogen tolerance; plant disease resistance; cell cycle pathway modification; plant growth regulator; homologous recombination; seed oil yield; protein yield; carbohydrate;
                                                              Novel isolated nucleic acid molecule associated with cancerous state
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      phosphorus; photosynthesis; lignin; galactomannan; polynucleotide; gene; ss.
                                                                                                                                                                                                                                                                                                                                                                             Sequence 468 BP; 131 A; 114 C; 114 G; 109 T; 0 U; 0 Other;

The invention relates to a recombinant DNA construct comprising a promoter functional in a plant cell, where the promoter is positioned to provide for expression of a polynuclectide encoding a polypeptide from a microbial source. The invention also relates to a transformed plant comprising the recombinant DNA construct and a method of producing a cransformed plant having an improved property. The plant is a crop plant such as maize or soybean. The method of producing a transformed plant comprising the recombinant DNA construct and growing the transforming a plant with the recombinant DNA construct is useful for improving plant properties. The recombinant DNA construct is useful for improving plant properties. The recombinant DNA construct is useful for producing plant properties. The recombinant DNA construct is useful for producing plant with the improved plant properties, e.g. improved cold, heat or drought tolerance, concreased resistance to plant disease, better growth rate by modification of the cell cycle pathway with plant growth regulators, increased resistance to plant disease, better growth rate by modification content, improved yield by modification of content, improved yield by modification of properties, introved yield by modification of properties, introved plant growth and development under at least one stress condition, improved plant growth and development under at least one stress condition, improved plants a partegral a partegral or improved glanties in modification or improved glanties in modification or improved glanties in modification or improved planties in a properties in partegral in properties a partegral and or improved planties in a properties in a properties in a properties in a partegral and in a properties a partegral and in a partegral and in a properties a partegral and in a partegral and in a plant in a partegral and in a partegral and in a plant in a partegral and in a plant in a partegral and in a partegral and in a plant in a partegral and in a plant in a plant in a partegr production. This sequence represents a bacterial polynucleotide used in the scope of the invention. Note: The sequence data for this patent did not form part of the printed specification but was obtained in electronic for expression of a polynucleotide encoding a polypeptide from a microbial source, useful for producing plants with improved properties. pharmaceutical compositions and vaccines for Streptococcus pneumoniae.

Claim 1; Page 637-642; 1409pp; English.

The present invention describes a computer readable medium which has the nucleotide sequences SEQ ID NO:1 to 391 (AAV52134 to AAV52524) recorded con it, or a repersentative fragment or a sequence at least 95% identical to SEQ ID NO: 1 to 391. The nucleotide sequences depicted in SEQ ID NO:1 to 391. The nucleotide sequences depicted in SEQ ID NO:1 co 391 (AAV52134 to AAV52524) are genomic fragments from Streptococcus comenioniae. The present invention also describes an isolated nucleic acid molecule encoding a homologue of any of the fragments of the S. pneumoniae comprising; (a) screening a genomic DNA library using as a process comprising; (a) screening a genomic DNA library using as a probe a target sequence of the library which contain sequences that the members of the library which contain sequences that complication to the target sequence and isolating the nucleic acid molecules crown the members of (b) isolating molecules whose nucleotide sequence is nonclogous to amplifying nucleic acid molecules whose nucleotide sequence is commenciae genome to prime the amplification and isolating the amplified sequence commercial importance, or expression modulating fragments of the S. commercial importance, or expression modulating fragments of the S. commercial inmortance, or expression modulating fragments of the S. commercial invention can be used in a constant sequence. for S. pneumoniae

Sequence 5, Application US/09142569

Patent No. 6417315

GENERAL INFORMATION:
TITLE OF INVENTION: Extracellular Matrix Signalling Molecules
TITLE OF INVENTION: Extracellular Matrix Signalling Molecules
TITLE OF INVENTION: Extracellular Matrix Signalling Molecules
TITLE OF INVENTION: Extracellular Matrix Signalling Molecules
CORRESPONDENCES:
TITLE OF INVENTION: Extracellular Matrix Signalling Molecules
CORRESPONDENCES:
TITLE OF INVENTION: United States of America
STATE: Illinois
COMPUTR: Illinois
COMPUTR: Illinois
COMPUTR: Enabable Form:
MEDIUM TYPE: Floppy disk
COMPUTR: Reabable Form:
MEDIUM TYPE: Ploppy disk
COMPUTR: PatentIn Release #1.0, Version #1.30
CURREATING SYSTEM: PC-DOS/MS-DS
FILING DATE: 02-Apr-1999
FILING DATE: 02-Apr-1999

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ò
                                                                          g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence 80, Application US/08961527

Patent No. 6420135

GENERAL INFORMATION:
APPLICANT: Charles Kunsch
TITLE OF INVENTION: Streptococcus pneumoniae Polynucleotides and Sequences
NUMBER OF SEQUENCES: 391

CORRESPONDENCE ADDRESS:
ADDRESSEE: Human Genome Sciences, Inc.
STREET: 9410 Key West Avenue
CITY: Rockville
STATE: Maryland
COUNTRY: USA
                                                       Sequence 16.14, Appl Sequence 11, Appl Sequence 1500, Ap Sequence 1500, Ap Sequence 1182, Appl Sequence 17038, Appl Sequence 28, Appl Sequence 28, Appl Sequence 28, Appl Sequence 11948, A Sequence 11948, A Sequence 1, Appl Sequence 1, Appl Sequence 1, Appl Sequence 1, Appl Sequence 1, Appl Sequence 1, Appl Sequence 1, Appl Sequence 1, Appl Sequence 1, Appl A
                                                                                                                                                                                                                                                                                                                                                                            Sequence 12548, A

GENERAL INFORMATION:
TITLE OF INVENTION: And Medicinal Antibody Against Connective Tissue Growth Factor
TITLE OF INVENTION: Monoclonal Antibody Against Connective Tissue Growth Factor
TITLE OF INVENTION: Monoclonal Antibody Against Connective Tissue Growth Factor
TITLE OF INVENTION: Monoclonal Antibody Against Connective Tissue Growth Factor
CURRENT APPLICATION NUMBER: US/09/582,337
CURRENT FILING DATE: 1997-12-25
PRIOR APPLICATION NUMBER: JP P1998-356183
PRIOR APPLICATION NUMBER: JP P1998-356183
PRIOR FILING DATE: 1998-12-15
NUMBER OF SEQ ID NOS: 27
SOFTWARE: PatentIn Ver. 2.0
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö
                                                                                                                                                                                                                                                                                                                                                                                                                    ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence 1, Application US/09187478
Patent No. 6348329

ABRC Stock Number CS822250; T-DNA left border flanking sequences of
ABRC Stock Number CS822250; T-DNA left border flanking sequences of
ABRC Stock Number CS822250; T-DNA left border flanking sequences of
Syngenta Arabidopsis Biological Resource Center (ABRC).
Sequences represent a pool of amplified genomic regions and not
single contiguous sequences.
Class: TDNA tagged.

An Arabidopsis full-length cDNA library was constructed essentially
as reported previously (Seki et al., 1998).cDNA cleaved with BamHI
and XhoI was ligated to modified Lambda FLC-1 vector (Carninci et
al., submitted for publication) digested with BamHI and Sall. This
clone is in a modified pBluescript vector. Please visit our web
site (http://www.gsc.riken.go.jp/e/plant/index _e.html) for further
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         BP562932 RAFL16 Arabidopsis thaliana cDNA clone RAFL16-39-009 5',

/clone lib="Lambda-PRL2"
/clone lib="Lambda-PRL2"
/clone lib="Vector: lambda Zip-Lox; Site 1: Sal; Site 2: Not;
Lambda PRL2 is a cDNA library derived from equal
quantities of 4 pools of mRNA. The mRNA sources were 1) 7
day germinated etiolated seedlings; 2) tissue culture
grown roots; 3) staged plants half with 24 hour light
cycle, half on 16 hr light, 8 hour dark-rosettes; 4)
same plants as 3 but aerial tissue (stems, flowers and
saliques. The vector is BRL's lambda Zip-Lox. The cDNA
inserts were directionally cloned with Sal-Not arms using
oligo dT primed cDNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Arabidopsis thaliana (thale cress)
